Polycore High Index that Gives You the Control

Reno, NV, USA – August 6, 2008– Polycore Optical has moved into high index materials supplying their new 1.71 index Semi Finished Single Vision line. Unlike other ultra high index materials, this product allows labs with the appropriate tooling to process the lenses in house, avoiding high processing fees previously associated with these materials. Because of this, Polycore 1.71 index is an excellent value for those with direct surfacing capability. The Polycore 1.71 has a higher tensile strength than the majority of materials available on the market today, giving it superior drill-mounting capabilities. Additionally, Polycore 1.71 index material has a higher abbe value than many other ultra high index materials, defying conventional beliefs about high index lenses. Polycore offers this new lens in 11 different base curves for optimal cosmetic appeal.

Polycore Optical USA will be exhibiting at Vision Expo West, booth LP2057. Come and see how Polycore is “Simplifying the Business of Sight.” For more information, please call 1-888-645-7788.
